

U. S. ARMY AIR CORPS
MAXWELL FIELD, ALA.

Sunday P.M.

Hi Hong,

First let me apologize for the pencil. I just finished a couple of math problems and I didn't want to look around for my pen.

How are things? What's new? How is Arthur and Mitchell? You tell Arthur, that if he don't eat and get fat, we (meaning Eddin and I) won't be able to take him around with us when we come home.

I believe I told you all about this place. I haven't much time to write now, as anything that I don't write here is enclosed in my letter to Pop.

I just got through with two courses. Aircraft identification and communication. I got a 95 and a 90. The only thing that bothers me a bit is math and I think I will have that licked in a couple of days. Vectors and physics is what I still have to look forward to.

I met to Eddin and told him to get me some collar insignias. If he don't receive my letter before he comes home will you tell him for me.

The boys here are having a big argument over
the firepower of a 20 mm and a 50 cal. and I can't
write. I have a couple of air gunners in my room
and as I said — If you can't make head or tail
of this letter neither can I.

I had something else to write. If I think
of it I will drop you a card

Yours
Harry

P.S. Now we have an air mechanic in it so
good night —

P.P.S. Saw that trench coat

Harry

P.P.P.S. How far does a 20 mm. fire and what
is the effective range.

Who cares

Harry

P.P.P.P.S. Have you got any money?
